

**Dr.Reem(16 M.)**

Q1/ What is the indications of treatment partial denture?

Q2/ Define rest and enumerate only the different types of rest used ?

Q3/ Define cast spot and what is the benefit from doing it during frame work construction?

Q4/ During checking frame work in patient, s mouth the frame work pop up before complete insertion is accomplished , what are the probable causes and how you can overcome this problem?

**Dr. Safwan**

Q5/ Write (True) for correct sentences and (False) for the wrong one then correct the wrong sentences: (10 M.)

1. If gagging is coincident with the insertion of a R.P.D, it is likely that the difficulty is psychological rather than physiological.
2. Gagging after insertion of mandibular R.P.D may be caused by an accumulation of saliva under the denture.
3. Problems with phonetics usually associated with change in the contour of the anterior palate only.
4. Cheek biting caused by insufficient horizontal overlap of maxillary and mandibular posterior teeth.
5. Maintenance visit for R.P.D should be scheduled every 3 to 6 weeks.
6. If a patient has only a few remaining natural teeth and has a history of bruxism, more damage may be done if to the remaining natural teeth if the denture is worn at night.
7. The patient should store the prosthesis in water when it is not in oral cavity to prevent shrinkage of denture base.
8. The choice of occlusal correction procedure preliminary determined by the patient.
9. Intraoral detection and correction of occlusal discrepancies should be done while the denture completely seated in the oral cavity.
10. The main goals for adjustment of retentive clasps, to limit unnecessary force application to the tissue surrounding the abutment.

**Q6/Dr.Tariq(14 M.)**

- a- Mention the advantages and disadvantages of attachment?
- b- Mention the indications for removable partial dentures?

*Good Luck*
